## REASONS FOR ALLOWANCE

### *Continued Examination Under 37 CFR 1.114*

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on **September 29, 2006** has been entered.
2. No amendment to the claims have been filed.
3. Claims 49-57 remain pending in this application.

### *Information Disclosure Statement*

4. The information disclosure statement filed on **September 29, 2006** fails to comply with 37 CFR 1.98(a)(3) because it does not include a concise explanation of the relevance, as it is presently understood by the individual designated in 37 CFR 1.56(c) most knowledgeable about the content of the information, of each patent listed that is not in the English language. It has been placed in the application file, but the information referred to therein has not been considered.

The listed reference 196 26 097 (AU) is lacking an English translation. The search report is based on different sets of claims from the instant application and the instant application is not claimed as national stage of PCT/US01/32087.

### *Reasons For Allowance*

5. The following is an examiner's statement of reasons for allowance: of the prior art references considered, none has disclosed a *digital micro-mirror device (DMD) format conversion system* for

Art Unit: 2872

outputting a *stereoscopic encoded optical signal* in a format readable within an *image projection display system* employing a *DMD* and a *color wheel*, wherein the DMD format conversion system comprises a *3D data formatter* for receiving an *input signal* comprising stereoscopic information having an input frame rate and providing an *output signal* having stereoscopic information and control information that has a *self synchronized output frame rate independent and decoupled from* the input frame rate, a *digital micro-mirror device (DMD) data formatter* comprising a dual port memory controller, a memory device, a digital micro-mirror device data converter and a digital micro-controller, for receiving the output signal having stereoscopic image information and control information from the 3D data formatter and for *outputting a DMD output signal* having stereoscopic image information and control information. The DMD output signal having stereoscopic image information and control information including a *color wheel control signal indicative of rotation rate and output digital micro-mirror device data indicative of* micro-mirror switching rates wherein the color wheel control signal and output digital micro-mirror device data are *synchronized* based on the output frame rate generated by the 3D data formatter. The output DMD data is readable by a digital micro-mirror chip. The DMD format conversion system is further comprised in a DMD projection system that further comprise an illumination source for transmitting light to a condensed optics, a rotating color wheel that receives the light from the condensed optics and is coupled to the digital micro-mirror device data formatter, a digital micro-mirror chip for reflecting light from the rotating color wheel, a 3D encoder system for stereoscopically encoded the light reflected from the digital micro-mirror chip and a projection optics for projecting the stereoscopic encoded optical signal, as set forth in the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
